

# CLEARPATH DS-120™

## **ClearPath DS-120 Detects Autofluorescence of the Crystalline Lens of Eye**

### **Product Features**

- **Non-Invasive**
  - **6 Second Test**
  - **Immediate Results**
  - **No Biohazard Waste**
  - **Touchscreen Tablet Display\***
- 
- *Can attach to the left, right or back of the instrument to accommodate various office settings.*

# Why Test for Lens Autofluorescence in Eye-Care?

---

- Numerous scientific journals have demonstrated the correlation between elevated lens autofluorescence and the presence of advanced glycation end-products which accumulate during the progression of age-related diseases such as diabetes.  
**Diabetes is leading cause of adult blindness in the world.**
- Eye-care professionals already screen for chronic disease (glaucoma, retinopathy).
- Evaluating your patient's lens autofluorescence can drive practice revenues by:
  - Strengthening relationships with patients and solidifying referral patterns by contributing further to the overall wellness in comprehensive eye exams.
  - Increasing lens/frame sales and lowering lens “redo” costs from poor refractions (people with diabetes have extensive vision changes).
  - Increasing the use of other reimbursable/CPT code instrumentation - as people with diabetes require a greater level of eye health management.
